

I am Abhishek and I am from Delhi. I completed my graduation in Bachelor of Technology from Maharishi Dayanand University and I am also a part of Ed-yoda University. My hobbies are playing football and video games. Talking about my strength, I would say that- Never giving up and be hardworking are my strengths whereas believing other people quickly, sometimes become my weakness. I also like to do coding as it is a great technology that sharpens your brain.

I chose Ed-yoda's Python-Django program because I wanted to switch from my current operations field to IT field. I saw multiple advertisements regarding this program and I was pretty delighted when I looked it up on Edyoda website as it was very nice and under my budget. The journey started with Python, then we learnt about AWS, Data Structures, Data Wrangling, Databases and finally, Python. Each instructor was very nice and had good understandings of the subject. The support staff are also very nice and they usually reply for all of your queries in 24 hours as well as their exam structure is pretty amazing too. They do have a placement team as well that provides important information such as CV making, interview tips and other necessary information required to successfully land a job. Since, they have so many qualities it seemed nice to me to join them to get my field switched. I am still revising some of the topics taught and work on some coding questions every day and do hope to get a job quickly in the nearby future
